

WRITING ASSIGNMENT

Concept: “Security Best Practices for Development Operations Teams”

When organizations begin a DevOps practice, there’s a promise of improving security.

Research from Adobe shows that companies are increasing budget allocation to mobile app development, without considering mobile app security testing as a key part of their strategy.

This informative post will offer readers best practices for integrating security throughout their DevOps cycle so it becomes second nature as part of the process and development team culture. Subtopics that will be explored further are as follows:

- Team culture and training
- Service and resource governance
- Developing security processes
- Automation

PERSONA

- Chief Technology Officer

tone

- Informative, Expert, Explanatory, Cutting-Edge

WORD COUNT

- 400 words

GUIDELINES

- Include exactly two relevant hyperlinks within the copy
- Include each of the following keyword phrases in the copy: “mobile application” & “mobile app security”
- Provide an original title for your copy that reflects your angle on the topic

NOTES

- Your byline will not be used
